

APC40

ABLETON CONTROL SURFACE

ABLETON LIVE PERFORMANCE, PERFECTED. Ableton and Akai Professional worked in a joint partnership to make the APC40 the perfect Ableton Live control surface. Whether you are an electronic-music performance artist and Live is your canvass, a DJ using Live to mix tracks, or a traditional musician using Live on stage or in the studio, the APC40 is designed for intuitive, powerful control. The APC40 requires no mapping for direct control of Live, and is completely re-mappable for advanced-user customization. Its exclusive bidirectional communication enables the APC40 to display clip and control status on its clip matrix and LED rings surrounding each knob. The clip matrix gives you an instant view of clip status: what's loaded, what's playing, and what's being recorded.

Designed in partnership with Ableton, the APC40 is the most advanced Live controller for the most advanced performers.
